34. (withdrawn) A method for coordinating product orders and distribution over a network wherein a manufacturer and a customer have a specific contractual price relationship and wherein said method comprises:

receiving a manufacturing specific order over said network from an exchange by a first communication device where said manufacturing specific order comprises a product identifier, which identifies a product of said manufacturer, a product volume and a customer identifier which identifies said customer;

transmitting a product availability request to a dealer by a second communication device wherein said product availability request comprises said product identifier and said product volume;

receiving an availability report from said dealer by a third communication device wherein said availability report comprises a dealer availability index for said product and a dealer price adjustment;

determining a customer price from said contractual price relationship and said dealer price adjustment and an availability index from said dealer availability index and a manufacturers inventory;
transmitting a manufacturer confirmation report to said exchange by a fourth communication device wherein said manufacturer confirmation report comprises said customer price and said availability index;
receiving a purchase confirmation from said exchange by a fifth communication device wherein said purchase confirmation comprises products distributed by said dealer.

35.(withdrawn) The method for coordinating product orders and distribution over a network of claim 34 further comprising transmitting a dealer purchase order to said dealer by a sixth communication device wherein said dealer purchase order comprises said products distributed by said dealer.

36.withdrawn) The method for coordinating product orders and distribution over a network of claim 34 wherein said first communication device and at least one of said group consisting of said second communication device, said third communication device, said fourth communication device, said fifth communication device and said sixth communication device are the same device.

37.(withdrawn) The method for coordinating product orders and distribution over a network of claim 36 wherein said first communication device; said second communication device; said third communication device; said fourth

communication device; said fifth communication device and said sixth communication device are the same device.

38.(withdrawn) The method for coordinating product orders and distribution over a network of claim 36 wherein said dealer distributes said product to said customer.

39.(withdrawn) The method for coordinating product orders and distribution over a network of claim 36 wherein said network is a world wide web.
